

# ***WallPlanter®***

## *Living Wall*

## WallPlanter®

WallPlanter is a living wall solution that provides an instant fully grown green facade. It can be fitted to new as well as existing walls or buildings.

The system consists of aluminium planters into which fully mature plants, trained onto a high quality steel mesh, are grown. These planters are then installed on to buildings or walls such as parking garages, hotels or office buildings. The individual units are provided with water and nutrition by fully automated irrigation systems.

# Immediate **living environment** on your facade!

TNT building (The Netherlands)

Kendal College (UK)
